## Biocontrols for Noxious Weeds

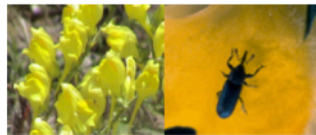

The Colorado Department of Agriculture (CDA) promotes the use of biological control in pest management since the 1940s. The Palisade Insectary is home to the Biological Pest Control Program which manages about 20 different species of biologic control agents for use against both noxious weeds and insect pests.

Join us to learn about what these beneficial agents can do for your noxious weed problem. Speakers are Sonya Daly, Biological Control Specialist and Karen Rosen, Canada thistle program manager.

Thursday, April 1, 2021  
5:30 - 6:30pm via Zoom

Canada Thistle Biocontrol

Dalmatian Toadflax Biocontrol

Diff. & Spot. Knapweed Biocontrol
